Answered: 778 Skipped: 411

template object write force new introduce even reason also think something
 large issues means reflection simple many still Break ABI include
 builds go Rust take change dependencies modules epochs one
 years project long compiler help things syntax support lot
 Remove hard features example library exceptions
 code developers use etc make default C want
 language class better e.g work version
 standard dependency management way maybe add
 packages allow rules need system standard library solution
 time errors types STL improve std build system worse
 package manager simplify fix every will understand easy users tools
 reduce less know without able build times functions ABI C standard
 compile times Python much really
